Klaus Kuhnke, Marianne Reuber, Detlef Schwefel

Solar Cookers in the Third World

Evaluation of the Prerequisites, Prospects and
Impacts of an Innovative Technology

A Publication of

Deutsches Zentrum für Entwicklungstechnologien – GATE

in: Deutsche Gesellschaft für Technische Zusammenarbeit (GTZ) GmbH

Friedr. Vieweg & Sohn Braunschweig/Wiesbaden

The authors:

Dr. Klaus Kuhnke is professor of applied physics at the Fachhochschule of Osnabrück, Germany. He taught solar energy at the Engineers' School of Tunis and worked for some years in industry and research institutions in the field of thermal solar energy applications.

Marianne Reuber is a graduate in education science, majoring in education in the Third World and adult education. She has worked for the GTZ since 1986 as an appraiser.

Prof. Dr. rer. pol. Detlef Schwefel works for over twenty years on socio-economic aspects of health and health care. His work comprised planning and evaluation of health and other projects in developed and developing countries, among them work on health indicators, evaluation methods and socio-economic risk factors.

Second, revised and translated edition, 1990

Table of Contents

List of Photos/Illustrations.....	V
List of Tables.....	VII
Types of Solar Cookers.....	VIII
Signs & Symbols.....	IX
1. Introduction.....	1
2. Solar cookers and solar cooker projects.....	6
2.1 Types and techniques.....	6
2.1.1 Box-type solar cookers.....	6
2.1.2 Reflector cookers and concentrators.....	14
2.1.3 Heat-accumulating solar cookers.....	19
2.1.4 Steam cookers.....	23
2.2 Function.....	25
2.2.1 Solar radiation energy.....	25
2.2.2 Transfer mechanisms.....	26
2.2.3 Loss mechanisms.....	28
2.2.4 Efficiency.....	31
2.2.5 Cooking and baking: temperatures and performance...	33
2.2.6 Thermal output.....	35
2.3 Solar cooker projects.....	38
2.3.1 India's national solar cooker program.....	38
2.3.2 Indo-German Dhauladhar project.....	42
2.3.3 ATDO project in Pakistan.....	44
2.3.4 Orangi project in Pakistan.....	46
2.3.5 SERVE solar cooker project in Pakistan.....	46
2.3.6 Solar cooker project in North Horr, Kenya.....	49
2.3.7 GTZ project Sobako 1 in Kenya.....	50
2.3.8 GTZ solar cooker project in Mali.....	52
2.3.9 Sudanese special energy program.....	53
2.3.10 The Chinese solar cooker development and dissemination project.....	54
2.3.11 Lessons to be drawn.....	56
2.4 State of the art and diffusion.....	57

IV

3.	Conditions of acceptance for solar cookers.....	62
3.1	Preliminary notes.....	62
3.2	Solar radiation.....	63
3.3	Energy demand.....	70
3.4	Social situation.....	78
3.5	Dietary patterns.....	81
3.6	Eating habits.....	87
3.7	Cooking habits.....	89
3.8	Use of stoves, fireplaces, and hearths.....	92
3.9	Solar cooker technology.....	98
3.10	Economic efficiency.....	103
3.11	Direct and indirect impacts.....	111
3.12	General conditions of acceptance.....	113
3.13	Summary.....	116
4.	Questions concerning solar cookers and solar cooker projects.....	117
5.	References.....	122
Appendix 1:	Solar cooking devices.....	136
	- Preliminary notes.....	136
	- Box-type solar cookers.....	138
	- Reflector cookers.....	165
	- Heat-accumulating solar cookers.....	193
	- Convective solar cookers.....	204
	- Comparative survey.....	209
Appendix 2:	Self-construction directions for the ULOG tropical solar cooker.....	214

Key terms: Solar cooker: technology, diffusion, evaluation, acceptance, projects
